

Word	Definition	Examples
<p>area</p>	<p>the total number of square units covered by a 2-D shape</p>	<div style="text-align: center;">  <p>2 cm x 3 cm = 6 cm²</p> </div> <p>The area of this rectangle is 6 square centimeters.</p>
<p>attribute</p>	<p>a quality or feature</p>	<p>The two pairs of equal sides are <i>attributes</i> of this rectangle.</p> <div style="text-align: center;">  </div>
<p>centimeter</p>	<p>1 meter = 100 centimeters 2.54 centimeters = 1 inch</p>	<div style="text-align: center;">  <p>1 centimeter</p> </div>
<p>circumference</p>	<p>distance around a circle, sphere, or cylinder</p>	<div style="text-align: center;">  </div>
<p>column</p>	<p>a vertical field in a chart, table, or graph</p>	<div style="text-align: center;">  </div>
<p>coordinate</p>	<p>the vertical or horizontal position of a point on a grid (Together the coordinates show the exact location of the point.)</p>	<div style="text-align: center;">  </div>
<p>corner</p>	<p>the point where the sides of a shape meet</p>	<div style="text-align: center;">  </div>
<p>cube</p>	<p>a 3-D shape with 6 square faces</p>	<div style="text-align: center;">  </div>
<p>cylinder</p>	<p>a 3-D shape with 2 circular faces of the same size</p>	<div style="text-align: center;">  </div>
<p>denomination</p>	<p>one in a series of values or sizes</p>	<div style="text-align: center;">  <p>1¢ 5¢ 10¢ 25¢</p> <p>2 4 7</p> <p>hundreds tens ones</p> </div>

difference	the answer to a subtraction problem; the result of subtracting one number from another; the amount by which one number is greater than another	$8 - 3 = 5$
equilateral	having sides that are all the same length	
equilateral triangle	a triangle whose sides are all the same length	
face	a flat surface on a 3-D shape	
flip	a reflection of a shape	
foot	1 foot = 12 inches 3 feet = 1 yard	
hexagon	a 2-D shape with 6 sides (The sides can all be the same length or different lengths.)	
inch	12 inches = 1 foot 1 inch = 2.54 centimeters	
isosceles triangle	a triangle with exactly 2 equal sides	
kilometer	1 kilometer = 1,000 meters 1 kilometer = 0.62 miles	
meter	1 meter = 100 centimeters 1,000 meters = 1 kilometer	
number sentence	an equation or inequality	$3 + 4 = 7$ $5 - 3 = 2$ $4 + 5 > 8$
octagon	a 2-D shape with 8 sides (The sides can all be the same length or different lengths.)	

<p>ounce</p>	<p>16 ounces = 1 pound (An ounce is a measure of weight. A fluid ounce is a measure of volume. There are 8 fluid ounces in a cup.)</p>	
<p>parallel</p>	<p>always the same distance apart</p>	
<p>parallelogram</p>	<p>a 2-D shape with 2 pairs of parallel sides</p>	
<p>pentagon</p>	<p>a 2-D shape with 5 sides (The sides can all be the same length or different lengths.)</p>	
<p>place value</p>	<p>the value of a digit as determined by its location relative to the other digits in the number</p>	<p style="text-align: center;">853</p> <p style="text-align: center;">The value of the 5 is 50, because it is in the tens place.</p>
<p>pound</p>	<p>1 pound = 16 ounces (A regular box of butter weighs a pound.)</p>	
<p>quadrilateral</p>	<p>a 2-D shape with 4 sides</p>	
<p>rectangle</p>	<p>a 2-D shape with 4 sides and 4 right angles (A square is a rectangle with 4 equal sides.)</p>	
<p>rectangular prism</p>	<p>a 3-D shape with 6 faces that are all rectangles (A cube is a rectangular prism with 6 faces that are all squares.)</p>	
<p>reflective symmetry</p>	<p>property of a shape that can be folded in half so that the two halves are mirror images of each other</p>	 <p style="text-align: center;">This shape has reflective symmetry because its two halves are mirror images of each other. If you folded it on the dotted line, the halves would match exactly.</p>
<p>regrouping</p>	<p>forming into a new group, as when five pennies are traded for a nickel or when 10 ones are traded for a ten</p>	 <div style="float: right; text-align: right;"> $\begin{array}{r} 1 \\ 36 \\ + 19 \\ \hline 55 \end{array}$ </div>

rhombus	a 2-D shape with 4 equal sides (A square is a rhombus with 4 right angles.)	
right angle	an angle that measures exactly 90 degrees	
right triangle	a triangle with one right angle	
scalene triangle	a triangle with no equal sides	
slide	movement of a shape along a straight path	
sphere	a ball shape in which every point on the outside is the same distance from the center (An egg shape is not a sphere.)	
sum	the result of adding 2 or more numbers; the answer to an addition problem	$3 + 1 = 4$ $3 + 3 + 7 = 13$
symmetrical (symmetry)	A shape is symmetrical if you can fold it down the middle so that the two halves match exactly.	
trapezoid	a 2-D, 4-sided shape with only 1 pair of parallel sides (Parallel means they would never cross even if they went on forever.)	
triangle	a 2-D shape with 3 sides	
triangular prism	a 3-D shape with 2 faces that are triangles and 3 faces that are rectangles	
turn	rotation of a shape around a point
